## 1963-64 COFFEE CROP

### TO SHOW LITTLE CHANGE

The Foreign Agricultural Service's first (June) estimate of the 1963-64 world coffee crop places total production at 66.1 million bags and exportable production at 52.3 million. This is 0.1 percent below the 1962-63 crop, as there is a slight decline in South American production.

The 1963-64 crop will exceed world requirements by only about 3 million bags. World trade will continue to increase in the coming year. Notable is the fact that production and requirements will be more nearly in balance than at any time since 1956-57.

### Production

North America: North American coffee production for 1963-64 is estimated at a total of 10.5 million bags, with 7.7 million exportable. This would be an increase of 6 percent, as most countries will show some gain.

Costa Rica's 1963-64 crop is early, because of early rains in the lowlands. This crop is expected to show an increase; however, there may have been some detrimental effects from volcanic ash which fell on the Central Valley on

---

This circular contains more detailed information than the summary of similar title published in the World Agricultural Production and Trade Statistical Report of June 1963.

1/ The coffee marketing season begins during the second half of the calendar year starting in some countries like Brazil as early as July 1 and in other countries about October 1. Exportable production represents total production minus consumption, except for Brazil prior to 1959-60 which was based on "registrations" of current crop minus port consumption and coast wise shipments. 2/ 132,276 pounds each. 3/ 2 year average. 4/ Includes Guadeloupe, Hawaii, Jamaica, Puerto Rico, and Trinidad & Tobago. 5/ Includes Bolivia, British Guiana, Paraguay and Surinam. 6/ Prior to 1962-63 shown as Ruandi-Urundi. 7/ Beginning with 1961-62 includes West Cameroon. Prior to 1961-62 this area was identified as Southern Cameroon and its production was included with Nigeria. 8/ 3 year average. 9/ Prior to 1959-60 Ruandi-Urundi shown in Congo (Leopoldville). Beginning 1962-63 shown as Burundi and Rwanda. 10/ 1 year only. 11/ Includes Cape Verde, Comores Islands, Dahomey, Gabon, Ghana, Liberia, Nigeria, Republic of Congo, Sao Tome & Principe, Sierra Leone, and Spanish Guinea. 12/ Includes New Caledonia, New Hebrides, North Borneo, Papua & New Guinea, Portuguese Timor and Vietnam.

Foreign Agricultural Service. Prepared or estimated on the basis of official statistics of foreign governments, other foreign source materials, reports of Agricultural Attachés and Foreign Service Officers, results of office research and related information.

April 7. The Ministry of Agriculture has also reported that coffee fungus diseases, especially "ojos de gallo," have been noticed in several regions.

The Dominican Republic will probably have a higher crop in 1963-64 primarily because of this being the "on-year" in the production cycle. A sizable increase is expected in El Salvador's 1963-64 crop. Nevertheless, it will still be below the record 1961-62 crop.

Guatemala had finished picking the low green coffee by the first of May, but was still harvesting the high grown. The 1962-63 crop will probably be a little larger than the 1961-62 crop. A study fostered by the Bank of Guatemala is intended to develop outlines for a diversification of agriculture and an acceleration of the development of those areas of the country which have substantial agricultural potential.

The 1963-64 Honduras crop will probably set a record. All areas except Choluteca had increases for the 1962-63 year. A new area has entered the Honduran coffee business. This is a small region transferred from Nicaragua to Honduras when the boundary between the two countries was settled in 1961.

Nicaragua's production continues to trend upward. The 1963-64 crop, however, may not show much change as this is supposed to be the "off" year in the production cycle. The Nicaraguan Coffee Cooperative has asked the National Congress to establish a Coffee Research Institute which would help to better cultural practices and therefore to increase yields. Production in Nicaragua is less than one-half pound per tree, and not much money or effort is being put into improved methods of culture.

Mexican production for 1963-64 is estimated at a slightly higher level than for 1962-63; however, exportable production may not be any higher, as domestic consumption continues to increase.

The coming Panama crop will regain most of the dropoff of 1962-63. The 1962-63 crop showed a substantial reduction from the previous year, and receipts in the Instituto de Fomento Economico were running much lower than for 1961-62.

South America: The 1963-64 South American crop is estimated at a total of 36,453,000 bags, with 27,567,000 bags exportable. This would be slightly below 1962-63; however, all other continents are expected to show some increase.

Brazil's 1963-64 crop will show the effects of the 1962 frost. The reduction in the State of Parana because of this will more than offset a much improved crop in the State of Sao Paulo. Reports indicate optimum weather conditions in Brazil (except for the frost), and many trees are making a good recovery.

The 1963-64 Colombian crop will show little change from the previous year. Harvesting operations were slowed earlier this year due to unusually heavy rains in many of the coffee-producing areas. The guaranteed farm price for coffee was raised by 13 percent on February 22, 1963. Private buyers are offering inducements to growers in the form of credit and other facilities.

An increase is estimated for Ecuador, despite drought conditions in the Province of Manabi, where about three-fourths of the coffee is produced. Prices received by farmers in Ecuador have increased slightly during the last year, and another important factor is that new roads, put into the producing areas, are reducing transportation costs.

Production continues upward in Peru; however, some of the plantations have been damaged by the "Broca" insect and drought and shortage of labor has been reported in other areas. In some areas of Tarapoto a decline in production is expected because of drought damage during January. Coffee growers received 3.2 percent of the total credit made by the Agricultural Bank during marketing year 1961-62.

The flowering of coffee trees in Venezuela has been heavy for the 1963-64 crop. Therefore, coffee exports are expected to hold up well for 1963.

Africa: The 1963-64 African crop is estimated at a total of 15.2 million bags, with 14.7 million exportable. On a total production basis this would be an increase of 0.4 percent over 1962-63.

Angola's 1963-64 crop is expected to be at the same level as for 1962-63. About 6 percent of the production will come from areas not yet reoccupied since the disturbances of 1961. Three-fourths of the coffee is produced on large coffee plantations. The African farmers are being encouraged to grow more coffee and their share is gradually increasing.

Coffee registrations for the 1962-63 year in the Ivory Coast far exceeded expectations, and made this the leading producer for this year. This was about double the 1961-62 crop. Stocks are expected to be at a high level at the beginning of the 1963-64 year.

Cameroon production is expected to show significant increases as additional trees come into bearing. The 1963-64 crop in Congo (Leopoldville) will probably show further recovery. Reports indicate that sizable quantities of coffee have been smuggled into adjoining countries from the Congo in the past two years.

Ethiopia's harvesting from new coffee areas is accounting for increases this year. This trend will continue as new access roads are built. Ethiopia is dependent on coffee for about half of the total export earnings, and the United States has been importing two-thirds or more of this amount.

Kenya's production is showing sizable increases. It is estimated that there are now 150,000 acres of coffee under cultivation, and this is about evenly divided between African and European growers. No definite program has been evolved to curtail plantings, although it has been announced that plantings after April 1963 would be prohibited.

The total 1963-64 crop for the Malagasy Republic is estimated at 975,000 bags. The Malagasy Government is setting up a long-term agricultural plan which looks forward to a production of about 1,165,000 bags in another 10 years. Production in the northern end of the east coast district is marginal, and it is anticipated that there will be reductions or eliminations in this area.

Prospects are good this year in Tanganyika, as weather has been favorable. The Government has warned growers of overproduction and urged that efforts be concentrated on higher standard and quality.

Uganda's production for 1963-64 is estimated at the same level as for 1962-63, which was a record. Prices at the Board's auctions during March were at the highest level since 1959, exceeding Shs. 200/- per cwt. (25 cents per pound) on March 21. In previous auctions the Board had been selling 24,000 bags of Standard Robusta for forward delivery, but at this auction offerings were cut to 12,000 bags.

Asia and Oceania: The 1963-64 crop for Asia and Oceania is estimated at a total of 3.9 million bags, with 2.3 million exportable. This represents a slight increase over 1962-63.

The 1963-64 crop in India is expected to show an increase over the 1962-63 crop, which was adversely affected by weather. Total acreage (1960-61 season) was reported as 294,929 acres -- 174,075 acres to Arabica and 120,854 acres to Robusta. The drop in production in 1962-63 is attributed to adverse weather conditions, and rains at picking time which affected processing.

The 1963-64 Indonesian crop will probably be somewhat below the bumper 1962-63 crop. Indonesia's production is mainly by smallholders who grow Robusta coffee, while the estates produce Arabica. Total area and production are expected to remain at about the current level. Some coffee may have been damaged on the Island of Bali by the dropping of hot ash and gases from a volcano, but the quantity lost is hardly significant.

Production in the Philippines continues to increase, and in the coming year there may be small amounts for export. Acreage in production amounts to about 128,000 acres, with one-third of this amount yet to come into bearing. Arabica production continues to increase; however, Robusta still accounts for more than one-half of the output.

Yemen's coffee production is presently down to half its peak. Coffee has been a major source of income for Yemen, and their coffees have been used primarily as a blend with other coffees.

Exportable production estimates for some of the smaller producing countries for 1962-63 and 1963-64, respectively, are as follows (in bags of 132.276 pounds): Bolivia - 20,000; 20,000; British Guiana - 4,000; 4,000, Paraguay - 35,000; 45,000, Surinam - 8,000; 8,000, Cape Verde - 2,000; 2,000, Comores Islands - 1,000; 1,000, Dahomey - 33,000; 33,000; Gabon - 16,000; 17,000, Ghana - 43,000; 48,000, Liberia - 29,000; 24,000, Nigeria - 18,000; 18,000, Republic of Congo (Brazzaville) - 11,000; 13,000, Sao Tome and Principe - 6,000; 6,000, Sierra Leone - 65,000; 65,000; Spanish Guinea - 110,000; 110,000.

#### World Trade

World trade of coffee showed a substantial gain in 1962. Recorded exports totaled 46 million bags in 1962, up by 5.4 percent over 1961 and another record. Exports from Asia and Oceania declined in 1962, but went up for all other continents. Contraband shipments probably accounted for more than a million bags, so total exports were somewhat over 47 million bags.

Trade in 1963 will be at approximately the same level as in 1962. This does not mean that consumption is not going up, for stocks were increased last year. The United States increased its green coffee stocks by 1.1 million bags, as importers anticipated the dock strike of late December.

COFFEE: Exports by continents as percentage of world exports

Continent	:Average :1950-54	: 1958	: 1959	: 1960	: 1961	: 1962
	:Percent	:Percent	:Percent	:Percent	:Percent	:Percent
North America .....	15.0	18.1	14.8	15.5	14.9	16.1

Total .....	100.0	100.0	100.0	100.0	100.0	100.0

U. S. civilian per capita consumption of coffee (on a green bean equivalent basis) was at approximately 16 pounds in 1962 and will probably show little change in 1963. Per capita consumption in the United States has shown little change during the past ten years, even though there has been a wide range in the retail price. Import requirements for the 1963 calendar year will probably be somewhat less than the record 24.5 million bags imported in 1962.

COFFEE: Exports of 9 principal producing countries as percentage  
of world exports

:	:	:	:	:	:	:

Trade sources estimate that U. S. coffee roastings for the first 6 months of 1963 were approximately 99.7 percent of the same period of 1962. Stocks at the beginning of 1963 totaled 3,964,000 bags, and by March 31 these had been reduced to 3,565,000 bags. Since 1959 stocks have generally been near the 3,000,000 bag level.

Prices of Arabica have continued to decline gradually, and were lower by June than at any time since 1949. Robusta prices, on the other hand, have strengthened since November 1962. However, since March 1963 the increase has been very small. New York spot prices in mid-June for Brazil's (Santos 4's) were 34.5 cents per pound, the same as a year earlier, while Colombian Manizales prices were 38.75 cents per pound compared with 39 cents in mid-June 1962. The Ambriz Robusta price by mid-June 1963 had strengthened from 21 cents per pound a year earlier to 27.75 cents per pound.

The proposed long-term International Coffee Agreement, negotiated at the United Nations in New York in the summer of 1962, is expected to become operative on October 1. This Agreement will have its headquarters in London, and will be in effect through September 30, 1967. It is primarily an export quota arrangement, but consuming country members will under certain conditions limit imports from nonmember countries. Certificates of origin will be required by members for all exports and reexports.
